This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand

the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties.

many manufacturing firms have closed or moved to lower-cost locations. The process of deindustrialization is often seen as part of the inevitable shift towards a knowledge based economy and urban economies come to rely on research and development, financial services, tourism and the creative industries. This book looks at the changing link between manufacturing and knowledge-based activities in urban regions. The authors develop a new framework drawing on insights from organization studies and regional economic literature looking at various international case studies in Western and Eastern Europe, South America and Asia.

This reference book is a complete guide to the trends and leading
